  },
  "tokenomics": "NEAR Protocol has a total supply of 1,225,066,553 tokens and a circulating supply of 1,217,906,154 tokens. It does not appear to have mechanisms like staking or burning.",
  "blockchain": {
    "choice": "NEAR Protocol uses its own blockchain, known as NEAR blockchain. This choice may reflect the project's aim to provide a scalable and user-friendly blockchain for dApps.",
    "features": "NEAR blockchain is distinguished by its scalability and usability, which supports the easy development and use of dApps. Notably, it uses a Sharding design to achieve high scalability.",
    "benefits": "The benefits of NEAR blockchain include high scalability, user-friendliness, and compatibility with dApps. Additionally, its unique Sharding feature allows it to process transactions faster and more efficiently than typical blockchains."
  },
  "comparison": "Compared to other similar projects, NEAR Protocol ranks high for its scalability and user-friendliness. However, it lacks some common tokenomic features like staking and burning, which may impact its attractiveness for certain investors."
}
